# Detected oil spills - Mediterranean Sea - Year 1999

Out of 1600 SAR images the project MIDIV detected 1640 oil spills in the Mediterranean Sea in the year 1999. This map should be linked with the map of SAR Image Density given that areas without spills are highly related to areas with less SAR images at our disposal for detection. More information can be found on the website of the Joint Research Centre - European Commission at <http://serac.jrc.it/midiv/>
